A railroad cut on the New York, Ontario and Western railroad, about two and one-half miles southeast of the Oxford station and one-quarter of a mile north of the 214th New York mile post. The cut is through red and greenish shales, alternating with thin grey sandstones. The dip is at least sixty feet to the mile, twenty degrees west of south. A layer of the nature of a conglomerate, containing an occasional quartz pebble, was noticed. The following species from this cut are listed in the Fifth Annual Report of the New York State Geologist: *Macrodon Hamiltoni*, *Actinapteria Boydi* (?), *Actinopteria* sp. (?), *Modiomorpha subalata* (?), *Leptodesma* sp., *Strophodonta perplana*. The altitude of this cut, taken from the profile of the New York, Ontario and Western railroad, is approximately 1,560 feet A. T. This locality is three and one-half miles west of south of Lyon brook bridge, and the difference in altitude between the base of the red shale and this cut is 348 feet. If the dip for the distance is sixty feet per mile, then the thickness of the rocks is 558 feet, all of which may be regarded as belonging in the Oneonta formation.
