

Cartesian plane geometry Volume 1

Filesize: 2.31 MB

Reviews

This pdf may be worth acquiring. It can be written in easy words and phrases and not hard to understand. I am pleased to tell you that this is basically the finest book I have read through during my personal existence and might be the greatest pdf for at any time.

To save **Cartesian plane geometry Volume 1** PDF, please follow the hyperlink beneath and save the ebook or gain access to additional information which might be relevant to CARTESIAN PLANE GEOMETRY VOLUME 1 book.

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 62 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1907 Excerpt: . . . Examples 18, 19, above, may be stated in the form--A line envelopes $x^2 y^2 k^2$; find the locus of its pole with respect to S . 1. A point describes $x^2 y^2 k^2$, find the envelope of its polar with respect to S . -- 1. For a reason that will be explained in Chapter XII. , the two curves which are respectively described by the pole and enveloped by the polar are called reciprocal polars with respect to the given (fundamental) conic. Example. --A point describes the curve $2x^2 5xy 2y^2 4x 2y - 1 = 0$; find the envelope of its polar with respect to $x^2 4y^2 = 100$. The polar of (x, y) is $xx' 4yy' = 100$; the coordinates (x', y') of the polar of (x, y) are therefore $x' = \frac{100}{x}, y' = \frac{100}{y}$. The problem is now, x, y satisfy the equation $2x^2 5xy 2y^2 4x 2y - 1 = 0$; to what relation are x', y' subject Since $x = \frac{100}{x'}, y = \frac{100}{y'}$, the desired result is obtained by direct substitution; it is $2 \cdot 100^2 x'^2 - 5 \cdot 100^2 x' y' + 2 \cdot 100^2 y'^2 + 4 \cdot 100 x' - 2 \cdot 100 y' - 1 = 0$. In general, if the point describes a given curve, its coordinates satisfy an equation of the form $f(x, y) = 0$; by direct substitution of the expressions for x, y in terms of x', y' this becomes $F(x', y')$, which is the equation of the envelope of the polar; and if the line envelopes a curve, its coordinates satisfy an equation $f(x', y') = 0$, which, by substitution of the...
